

Vet Battle Buddy™ is an evidence-readiness platform. It organizes military, medical, exposure, and claims evidence so more files enter adjudication decision-ready. It does not file claims, assign ratings, or replace the adjudicator.

What we offer

- Evidence First-Pass Yield™ as the operating measure
- Pre-submission gap detection against a public evidence pack
- Explainable evidence chain with human override
- Zero-trust design; FedRAMP Moderate alignment in progress (not an ATO)
- HIPAA-ready controls (readiness, not covered-entity certification)
- Designed for Azure Government (not a production authorization claim)

90-day pilot

- 90-day bounded pilot
- Primary measures: Evidence First-Pass Yield, missing evidence detected pre-submission, retrieval time, avoidable development actions, evidence-related rework, traceability
- Governance measures: human override rate, unsupported-output rate
- Results published only when independently defensible

What we will not do

- File or prosecute a VA claim
- Estimate, predict, or assign a disability rating
- Replace an accredited VSO, claims agent, attorney, or clinician
- Replace the adjudicator or issue an official determination
- Operate as a crisis line — veterans in crisis should call or text 988, then press 1
